CO-MIX

For Improved Compatibility, Stability and Suspension

CO-MIX is a compatibility agent that is added to tank mixes where simultaneous application of liquid fertilizer and/or crop protection products is desired. It may also be used when vegetable oil, solvent-based products or water are mixed with crop protection products, or when two or more products are applied as a tank mix.

- Improves the compatibility of fertilizers and pesticides in tank mixtures.
- Can be used in tank cleaning operations at 1 gallon per 100 gallons of water.
- Improves stability of the spray application mixture.
- Improves suspension properties for suspension concentrates.
- Aids in keeping tanks, hoses and strainers clean and free from crop protection residue buildup.
