MATRIXX

OMRI LISTED For Organic Use

100% Non-Ionic Wetter/Spreader/ Penetrant

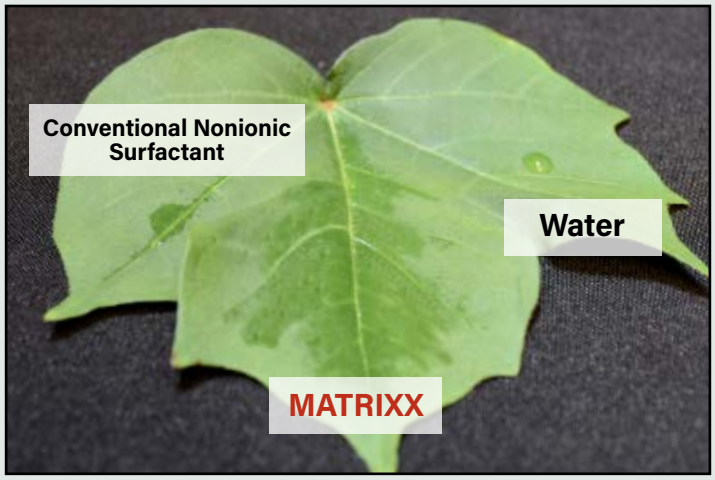

MATRIXX delivers wetting, spreading, and penetration properties superior to those of conventional surfactants. A unique combination of organo-siloxane and other nonionic surfactants gives **MATRIXX** its 100% active ingredient formulation.

THE MATRIXX ADVANTAGE

- Improved spray coverage
- Deeper, quicker penetration
- Better results under less than ideal spraying conditions
- Improved spray performance
- Ability to apply products in lower volumes
- Safe and effective
- More efficient uptake
- Shortens rainfast periods (translocators)
- Uniform coverage

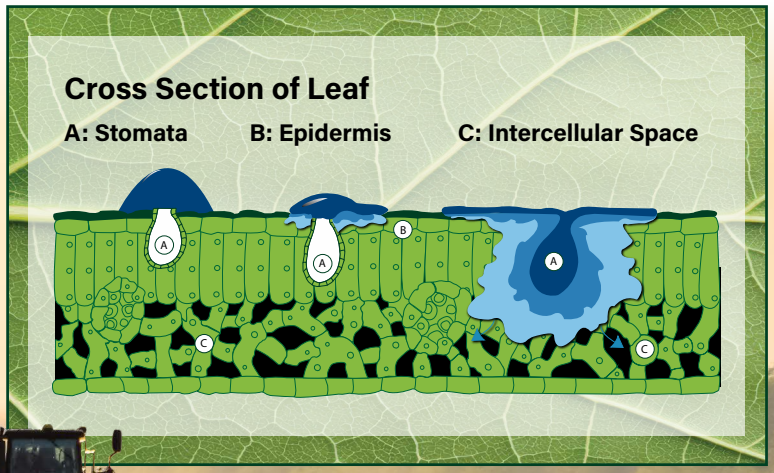

LEAF PENETRATION

MATRIXX works to reduce the surface tension of tank mix solutions, producing a phenomenon called stomatal flooding. This means the crop protection or nutritional product enters the leaf directly through the tiny openings called stomates. **MATRIXX** acheives quicker, more thorough penetration and translocation.

INCREASED WETTING AND SPREADING

Sprays containing **MATRIXX** spread across lead surfaces thoroughly and uniformly. Compare the coverage of **MATRIXX** to water alone and to a conventional nonionic surfactant.
