Impact F

Kick Your Crop into *Overdrive*

Impact F is a natural crop-health bio stimulant that reinforces physiological and metabolic capabilities within the plant, including: root development, nitrogen assimilation, carbon fixation, disease resistance, flowering, fruit set, and other desirable characteristics. **Impact F** is actively absorbed and systemically distributed throughout the plant, substantially increasing the plant's ability to overcome abiotic stress. The resulting action can improve yield and crop quality.

- Stabilized biological complex derived from natural (land and sea) plant compounds.
- Extracted through patented extraction and fermentation process.
- Contains key enzymes and amino acids for plant development.
- Contains most trace minerals, high levels of betaines, sugar alcohols (manitol), and carbohydrates (e.g laminarin).
- Compatible with liquid fertilizers, micronutrients, fungicides, most herbicides and insecticides.
- Contains levels of natural Auxin, Gibbererellin and Cytokinin.
- Disperses easily in water with little agitation.
- Improves biological activity of the soil.
- Improves nutritional efficiency.
- Increases Brix levels (natural plant sugars).
- Better root development and increased fruit set.
- Improves soil tilth, CEC, and water holding capacity.
- Increases plant photosynthesis.
- Increases plant health – greater disease resistance (SAR elicitor materials).

For best results, Impact F should be incorporated into a total spray program.

Critical stages for spraying:

- Early vegetative.
- Just before transition to reproductive stage.
- Post-fruit set fill for bulking.
