DRIFT-X
DRIFT REDUCTION TECHNOLOGY

Highly Effective Deposition and Drift Management

DRifT-X is specially formulated for use with most herbicides, insecticides and fungicides that are labeled for use in agriculture, forestry, roadside, industrial, non-crop, turf, golf course and ornamentals. **DRifT-X** is a deposition and drift management agent that reduces the number of spray droplet fines (<100 microns) and increases the VMD (Volume Median Diameter) of spray droplets. **DRifT-X** generates a more uniform droplet size spectrum which results in enhanced deposition and coverage of the spray on the targeted surface.

*(Proper nozzle selection and operation (pressure and spray angle), good operator evaluation and decision making on wind direction, temperature inversions, application speed and susceptible crops in the area combined with **DRifT-X** are necessary for maximum drift reduction potential.)*

Features/Benefits

- Delivers 20% more product to the target.
- Increases canopy penetration.
- Increases VMD of spray droplets.
- Easy, broad use.
- Added last to the spray tank.
- Low use rate (4-6 oz./acre).
- Reduces number of driftable fines <100 microns.
- Provides uniform coverage of products on targeted surface.
- Consistently high performing.
- Approved for use with Enlist Duo®, Xtendimax®, and Engenia®.
