Foam-Eater

Agricultural Foam Control

Less Foam, More Solutions

Foam-Eater is a high-grade silicone de-foam and anti-foam agent that is very effective in reducing or eliminating foam from agricultural spray applications.

- Eliminates or suppresses foam from most spray tanks.
- May be used to knock down foam already formed in the spray tank.
- Using a trigger spray nozzle will provide better contact with foam, and agitation will aid dispersion.

Application

- Apply 2-4 oz. per 100 gallons of water. To aid in foam prevention, add **Foam-Eater** before adding crop protection products.
- When used to reduce foam already in tank, add 2-4 oz. directly to foam.
