Synexis

Attain peak crop protection performance

Synexis is a specially formulated, multi-functional adjuvant designed to improve spray performance. Crop protection products that are combined with **Synexis** display better deposition, penetration, retention, sequestration and drift mitigation. **Synexis** has demonstrated improved results when used with most herbicide sprays.

Synexis is a multi-functional adjuvant that:

- Creates more uniform coverage and deposition.
- Controls drift with less driftable fines and larger VMD.
- Penetrates leaf surfaces for better control.
- Sequesters hard water ions in a low-foam formulation.
- Creates an extremely stable emulsion for more uniform deposition in the field.
- Is compatible with most crop protection products.

A jar test is recommended to confirm tank mix compatibility prior to use.

Multi-functional adjuvant from agriculturally derived oils and high-quality surfactant and emulsifier systems.
