Application efficiency for healthier plants

Veridia™ is a proprietary nonionic surfactant that is powered by **Proteon Technology™**. **Veridia™** reduces surface tension for better spray wetting and retention while improving foliar nutrient uptake, plant health benefits and crop protection performance.
Peptides are key signaling molecules in plants, enabling communication between cells to coordinate growth, development, and responses to stress.

- The Proteon Technology in **Veridia™** supplies peptides and amino acids produced from a proprietary enzymatic hydrolysis process that supports abiotic stress tolerance, recovery, and increased nutritional efficiency.
- Bioactive peptides supplied by **Veridia™** interact with specific receptors on the cell surface, triggering targeted cellular responses.
- These interactions lead to defined physiological effects in plants, including enhanced improved stress tolerance, increased fruit size, lateral root development and stimulation of germination.
