SYNERGY

The Solution for Better Weed Control

SYNERGY is a spray adjuvant formulated to enhance the activity of preplant, preemerge, and post-applied herbicides. It is especially effective in postemergence herbicide and desiccant/defoliant sprays and is well-suited for use under adverse weather conditions. Formulated from agriculturally derived oils, **SYNERGY** contains a high-quality surfactant and emulsifier system for easy mixing in spray solutions. It is designed for use any time a crop protection label calls for non-ionic surfactant, crop oil concentrate or methylated seed oil.

- Improves spray coverage and penetration
- Enhances pesticide performance
- Greatly increases leaf absorption
- Improves canopy penetration
