AMS Plus DRY

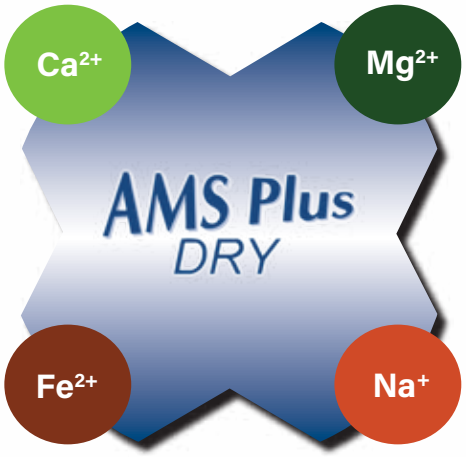

More Convenient for Optimum Weed Control

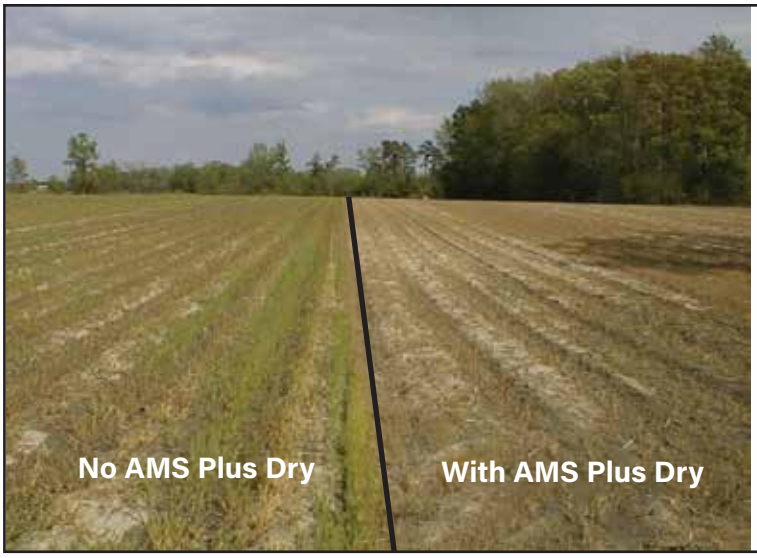

AMS Plus Dry is a **clean**, highly active ammonium sulfate combined with a unique proprietary polymeric drift control agent. By modifying solution pH and sequestering hard-water ions, **AMS Plus Dry** reduces drift and increases herbicide efficiency. The ammoniacal nitrogen in **AMS Plus Dry** has been found to promote herbicide uptake in agricultural applications. The use of high quality spray grade ammonium sulfate in **AMS Plus Dry** eliminates cold water sedimentation and nozzle plugging commonly associated with other dry ammonium sulfate.

- Convenient and easy to handle.
- Clean formulation.
- Increases herbicide activity.
- Sequesters and neutralizes hard water mineral ions.
- Minimizes antagonism between tank mixes.
- Ammonium nitrogen increases effectiveness of certain herbicides.
- Helps overcome adverse conditions.
- Enhances uptake.

Competitor's Dry AMS

A FIELD TREATED with glufosinate. **AMS Plus Dry** was not added to the weed-control solution for the left portion of the field; it *was* added to the solution sprayed on the right. As you can see, the part of the field treated with a solution that included **AMS Plus Dry** has significantly better weed control. Photo taken 5 DAT.
