Enhance your corn fungicide application

Quantum for Corn 21-0-0 is a chloride-free, clear liquid solution that may be applied as a foliar treatment and by drip, sprinkler, or flood irrigation. When used as a foliar fertilizer, **Quantum for Corn** should first be diluted with water before applying. Blends should not be acidified below a pH of 5.5

- Contains triazone- and methylene urea-based, slow-release liquid nitrogen to improve foliar absorption.
- An excellent fit in early V-Stage fungicide and/or herbicide applications.
- Delivers highly effective nitrogen and micronutrient package at critical stages in the growth cycle.
- Increases beneficial polyamine and amino acid levels leading to improved plant health and vigor
- Features enhanced humectants properties to keep products active on the leaf longer for increased uptake and efficiency, making an excellent fit for VT applications.
- Excellent tank-mix partner offering synergies with crop protection products.

Achieving proper nutrient balance through the root system alone is very difficult. **Quantum for Corn** provides a highly efficient nitrogen source and micronutrient package based on uptake and foliar efficiency factors formulated in the right ratio to meet your crop's nutrient demands.
