C4
SOIL SUGAR SOLUTION

Energize your Soil

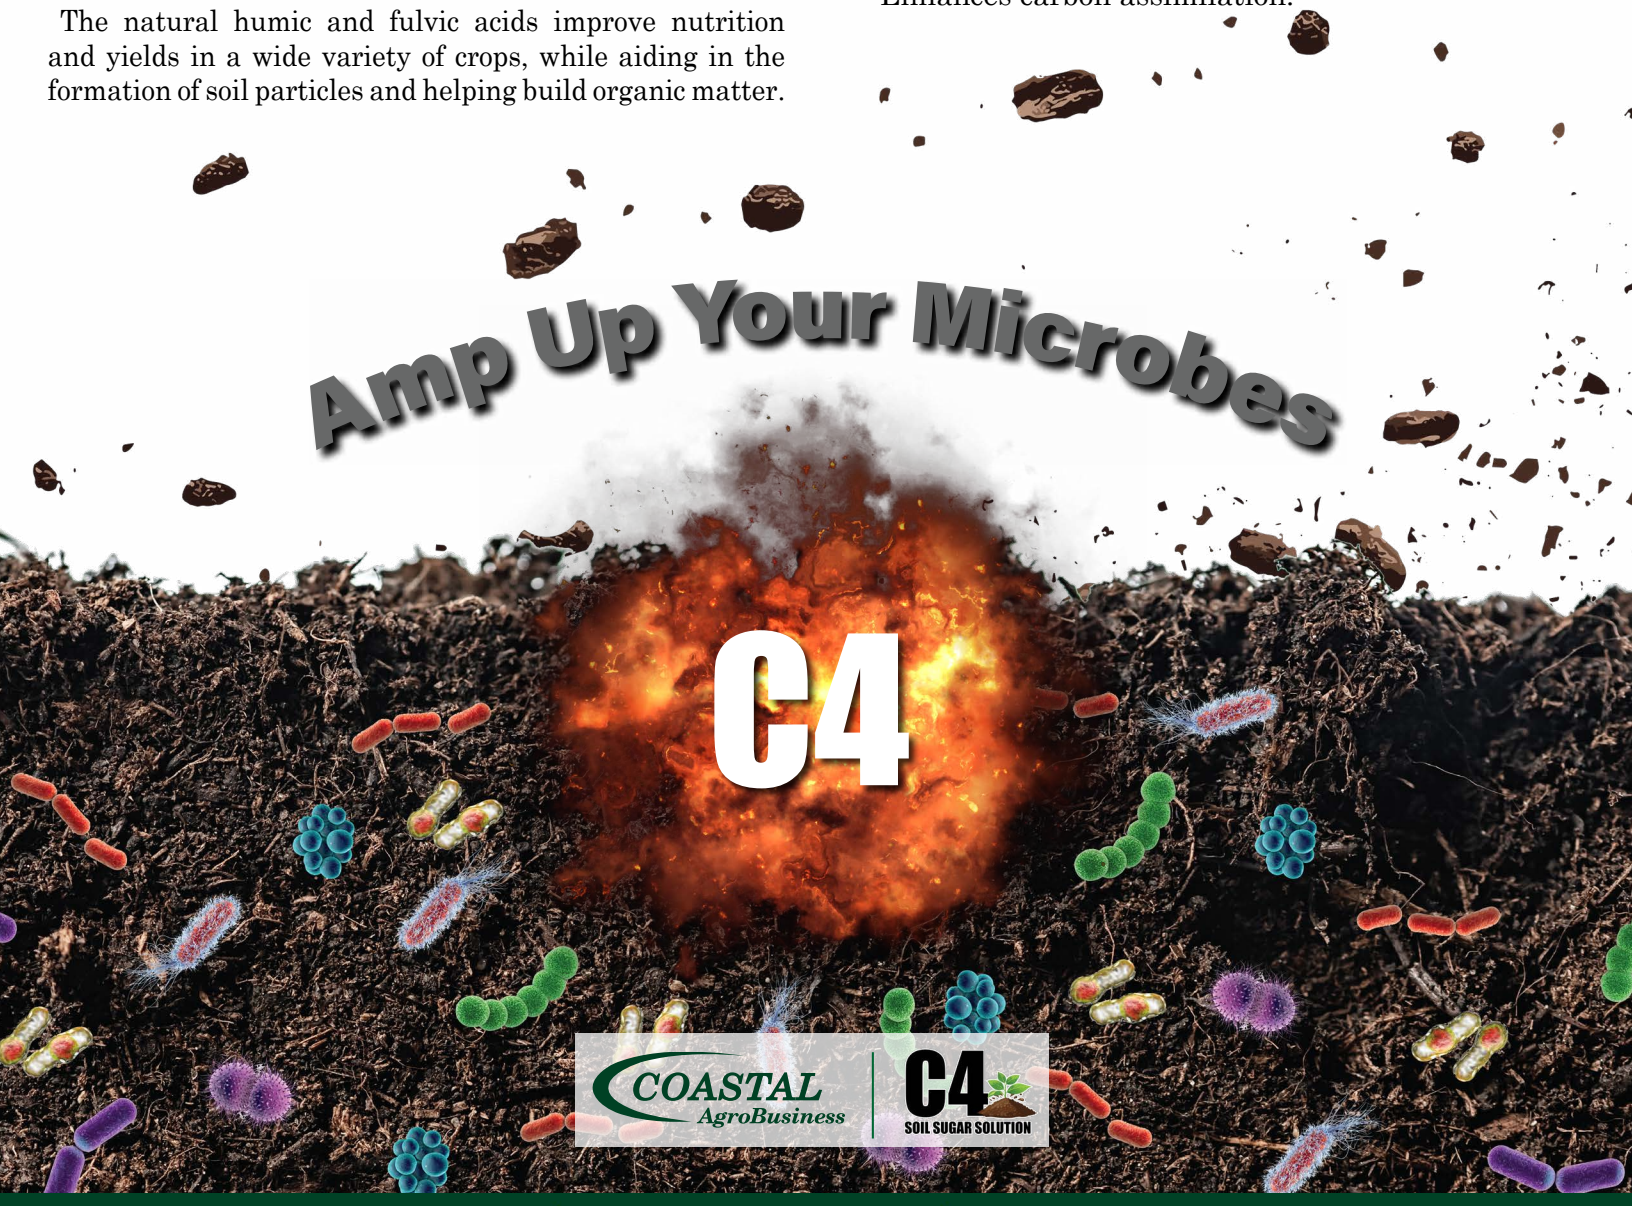

C4 Soil Sugar Solution is designed for direct field application or in addition to liquid fertilizers used as starter solutions. It contains simple sugars and natural humic and fulvic acids that stimulate microbial growth in the soil.

Simple sugars provide an easy source of nutrients for beneficial microbes residing in the rhizosphere, leading to an additional boost of carbon and other nutrients in the soil.

The natural humic and fulvic acids improve nutrition and yields in a wide variety of crops, while aiding in the formation of soil particles and helping build organic matter.

Features and Benefits

- Contains simple sugars, humic/fulvic acids, humins, humectants and growth enhancement compounds.
- Increases natural microbial population and activity.
- Enhances nutrient cycling and enzyme production.
- Improves soil structure and nutrient availability.
- Helps balance C:N ratio.
- Enhances carbon assimilation.
