F5
FOLIAR SUGAR SOLUTION

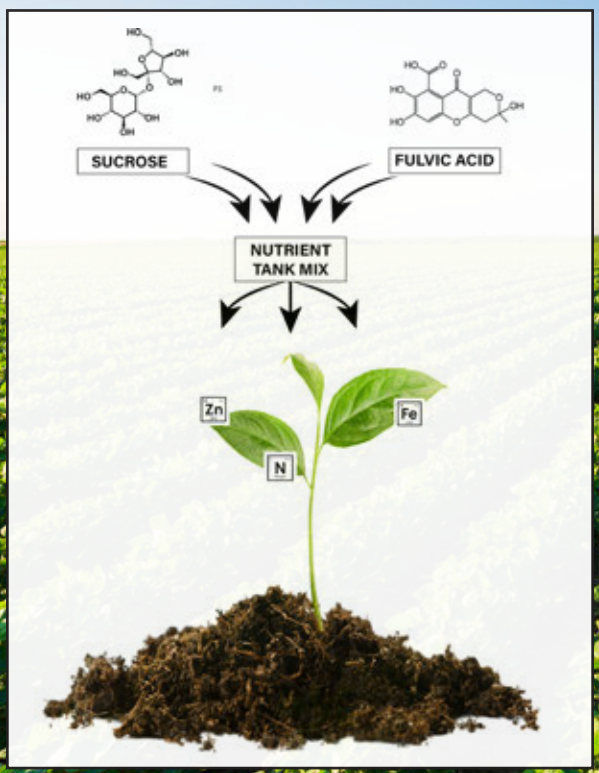

Targeted Energy, Superior Defense

F5 Foliar Sugar Solution is designed for direct field application or as an additive for foliar nutritional applications. It contains fulvic acid and simple sugars that provide a boost of energy in the form of carbohydrates where the plant needs it most, the foliage, while directly improving plant physiology. Fulvic acid is a small, water-soluble molecule from humic substance breakdown.

Features and Benefits

- Combines fulvic acid and simple sugars to give the plant the best physiological defense.
- Improves nutrient availability and transport into plant cells.
- Enhances stress tolerance when combined with fertilizers, accelerating deficiency correction.
- Promotes efficient allocation of plant energy to reproduction and grain fill, thereby enhancing yield.
- Improves crop protection efficacy by helping active ingredients enter plants faster.
- May boost beneficial insect populations and help fuel plant processes during periods of high demand or stress.
